

House Release Walkthrough

How a stage release is actually done in MarkSystems — built from a screen recording captured 9/22/2026, releasing house 00100165 (Sabana Reserve, model MO6/TRA).

This document exists to make step 2 of the Procurement & Release Control page's "How to use this page" guidance concrete. It was rebuilt from a second, clearer recording that captured the dialogs the first one missed — several details below correct what an earlier version of this document guessed at from text-only step descriptions. Step 2 was added directly from a screenshot, since the recordings both started after this navigation had already happened.

1. Log in to MarkSystems

Log in with your MarkSystems credentials.

2. Open House Release from the menu

From the main MarkSystems window: **Purchasing** → **Work Orders** → **House Release**.

Purchasing → Work Orders → House Release

3. Choose company/development, select the house, then set the stage

House Release opens straight into a **Company Selection** dialog — pick the company code, then the development code. Only then does the grid populate with that development's houses.

Company Selection

OK Cancel Help Close

Company: 100 Sabana Investments LLC

Development: SR Sabana Reserve

User: Igrimaldi Terminal: T03

Company 100 (Sabana Investments LLC), Development SR (Sabana Reserve).

Scroll the grid to find the target house and double-click its row. The grid already shows each house's **Stage** and **Release No.** — that Stage column is MarkSystems' own current-stage marker, the same value the Procurement & Release Control page reads to decide what's already been released.

House Release

Edit Delete Options Print Help Close

House	Model	Elevation	Buyer Name	Stage	Release No.	Block
00100017	MO3	TRA	SPEC,	F		
00100018	MO4	MOD	SPEC,			
00100019	MO4	TRA	SPEC,			
00100020	MO3	FAR	SPEC,			
00100021	MO4	FAR	SPEC,			
00100101	MO4	FAR	McC Campbell, Larken	Q		0.14
00100102	MO3	FAR	Viteri, Julio R.	O		0.14

Generate Work Orders for the selected house SR - Sabana Reserve

The House Release grid — Stage column shows F, O, Q for different houses in this development.

Double-clicking the house opens **Create Work Orders** for it (in the recording: "Create Work Orders — 00100165"). This is where the stage actually gets chosen: **Current Stage** shows where the house is now, and **New Stage** (with its own lookup) is where you're releasing it to. There's also a **Use Previously Selected Vendors** checkbox — exactly what it does to the Duplicate Contracts Found step below hasn't been confirmed yet.

The screenshot shows a software window titled "Create Work Orders - 00100165". It contains the following fields and controls:

- House: 00100165
- Model: MO6 Chestnut
- Elevation: TRA Transitional
- Buyer: SPEC,
- Address: TBD NW 35TH PLACE RD
- Construction Permit section:
 - Date: // (with a calendar icon)
 - Number: (empty field)
- Current Stage: (empty field)
- New Stage: (empty field with a search icon)
- Use Previously Selected Vendors: ☐
- Buttons: Preview, Create, Cancel, Help

Create Work Orders for house 00100165 — Current Stage / New Stage, and the Preview / Create / Cancel choice.

New Stage is typed in manually — MarkSystems doesn't suggest or default it. If Current Stage is blank, the house hasn't been released at all yet and the first stage to enter is **F**. From there the order is always **F** → **L** → **O** → **Q**, the same sequence the Release Queue tab enforces.

Preview and Create both appear here too, not just on the Work Order Release Status screen in step 5. As recommended directly: do a Preview first, every time, before ever clicking Create.

4. Duplicate Contracts Found — select the vendor for this house

Despite the name, this screen isn't flagging a duplicate that already exists. For this specific house, more than one vendor has a contract on file for the same cost code — so MarkSystems stops and asks you to select which one applies here. The dialog lists every eligible contract for that cost code (vendor, amount, and whether it was the *Previous* vendor used on this cost code); you pick the correct one and click Select. This repeats once per cost code on this house that has more than one vendor option; below are two different examples from the same release.

Picking the wrong vendor here — or having the same cost code end up split across two separate work orders on different contracts — is what produces the pattern seen repeatedly in the manual duplicate-payments check log (houses 00400236, 00400175, etc.): two work orders on the same cost code, different vendors, different amounts. That's the gap the Procurement & Release Control page's own Duplicate flag is built to catch after the fact.

Cost code 230-09 (Earthwork – Lot Scrape): 3 eligible contracts at the same \$200.00 amount; 2 are marked as Previous.

Cost code 270-01 (Roofing – Turnkey): 2 eligible contracts at meaningfully different amounts (\$5,373.29 vs \$5,527.00) — picking the wrong one here has a real budget impact.

5. Price Option, then review the list before previewing

MarkSystems asks a simple yes/no — **Price Option: "Show prices on work orders?"** — behind it, the **Work Order Release Status** window has already been listing every work order it's about to create, one line per cost code ("Preview Work Order (X) created for cost code Y"). That window has three real choices at the bottom: **Preview**, **Create**, or **Cancel**.

The Work Order Release Status list (cost codes 240-01 through 470-08 shown) with the Price Option prompt on top.

Both recordings captured so far went down the **Preview** path, which opens a read-only PDF and does not finalize anything. Actually finalizing the release means coming back to this same screen and clicking **Create** instead — that step hasn't been recorded yet, so treat this document as covering everything up through the preview, not the final confirmation.

6. Preview — one page per work order

Clicking Preview opens a PDF in Adobe Acrobat with one page per work order about to be created — 20 pages in this recording, each still marked **(PREVIEW)** in the work order number until the batch is actually created.

Page 1 of 20 — cost code 230-02, Earthwork – Build Pad, \$600.00

How this maps to the Procurement & Release Control page

In MarkSystems...	...use this page to...
Decide a house is due for a stage release	Check the Release Queue tab first — it tells you exactly which stage is due, computed live from the permit tracker / house release schedule, before you go do anything in MarkSystems
Set New Stage in Create Work Orders	This is the same F/L/O/Q letter the Release Queue tab tracks — the House Release grid's Stage column is what this page reads (as wostage) to know a stage has already happened
Pick a contract in Duplicate Contracts Found	No equivalent here — this is a MarkSystems-side pricing decision. But if the wrong contract gets picked (or a cost code ends up on two separate work orders), that's exactly what shows up as a Duplicate flag here afterward
Create → work orders actually get made	Click "Review released WOs" on that house's row to see those same work orders reconciled against budget, with duplicates and amount mismatches flagged automatically
Job-specific cost codes on the preview (driveway, septic, grading, etc.)	Use the Job-Specific filter in Reconciliation — those depend on lot size/drawings, not a fixed budget, so they get their own "matches drawings/site" checkbox instead of an amount-based flag

Sources: steps 2 and 3's screenshots were provided directly (the recordings below both start after this navigation had already happened). Steps 1, 4, 5 and 6: Windows Steps Recorder capture, 9/22/2026 9:29:26 AM – 9:31:45 AM (50 recorded steps), replacing an earlier 9/21/2026 recording of the same house that lacked screenshots of the Duplicate Contracts Found and Price Option dialogs. The full recording, including screenshots not reproduced here, is available as house-release-recording.zip on the Procurement & Release Control page.
