

House Release Walkthrough

How a stage release is actually done in MarkSystems — built from a screen recording captured 9/21/2026, releasing house 00100165 (Sabana Reserve, model MO6/TRA).

This document exists to make step 2 of the Procurement & Release Control page's "How to use this page" guidance concrete. It was built directly from a Windows Steps Recorder capture (click-by-click descriptions plus screenshots), not written from memory.

1. Open MarkSystems and select the company

Click into the MarkSystems [Estela Living] window, then the Company Selection dialog to pick the company the house belongs to.

2. Find the house in the House Release grid

Scroll the House Release grid to find the target house, then double-click its row. This opens a **Create Work Orders** window for that specific house (in the recording: "Create Work Orders – 00100165").

3. Create Work Orders

In the Create Work Orders window, enter/confirm the relevant field and proceed. This is the step that actually tells MarkSystems to generate work orders for every budgeted cost code on this house for the stage being released.

4. Duplicate Contracts Found

MarkSystems runs its own duplicate check at this point and, if triggered, shows a **Duplicate Contracts Found** dialog to review before continuing.

Important distinction: this dialog only catches an exact duplicate contract (the same contract already existing). It does **not** catch two separate work orders landing on the **same cost code** at **different amounts** — which is the actual pattern that has repeatedly shown up in the manual duplicate-payments check log (e.g. houses 00400236 and 00400175). That specific gap is exactly what the Procurement & Release Control page's own Duplicate flag is built to catch, on top of what MarkSystems already checks here.

5. Price Option

Choose the Price Option MarkSystems should use to price the new work orders.

6. Review the work order preview before it finalizes

MarkSystems opens a preview PDF in Adobe Acrobat — one page per work order it's about to create. In this recording that was 20 pages (20 separate work orders) for a single house's stage release. Each work order number is marked **(PREVIEW)** until the batch is finalized. Three example pages from the actual preview, showing different cost codes on the same house and release:

The screenshot shows a web browser window with a software interface. The browser's address bar shows a URL starting with 'rpt_182731554491981289...'. The software interface has a top navigation bar with a 'Menu' button, a 'Add file to PDF Space' button, and several tool icons. A central panel displays a 'Permit Recorder - Recording How' dialog box with a 'Phase Record' button. The main content area shows a form for a permit application. The form includes fields for 'DEVELOPMENT', 'HOUSE', 'MODEL/ELEVATION', 'BLOCK / LOT', 'ORIENTATION', 'VENDOR', 'BUYER', 'SPEC.', 'HOUSE ADDRESS', and 'DATE'. A table at the bottom lists items with columns for 'ITEM CODE', 'ITEM NAME', 'QTY', 'DESCRIPTION', and 'AMOUNT'.

ITEM CODE	ITEM NAME	QTY	DESCRIPTION	AMOUNT
470-03	PICK UP 2 - OCALA	1	PICK UP 2 - OCALA	350.00
TOTAL				350.00

Reviewing this preview page-by-page is the natural moment to sanity-check amounts before committing — but as the callout above notes, MarkSystems' own review doesn't compare against budget or catch same-cost-code duplicates across separate work orders. That's what the Procurement & Release Control

page's Reconciliation view is for, right after this step.

How this maps to the Procurement & Release Control page

In MarkSystems...	...use this page to...
Decide a house is due for a stage release	Check the Release Queue tab first — it tells you exactly which stage is due, computed live from the permit tracker / house release schedule, before you go do anything in MarkSystems
Create Work Orders → review the preview PDF	After finalizing in MarkSystems, click "Review released WOs" on that house's row to see the same work orders reconciled against budget, with duplicates and amount mismatches flagged automatically
Job-specific cost codes on the preview (driveway, septic, grading, etc.)	Use the Job-Specific filter in Reconciliation — those depend on lot size/drawings, not a fixed budget, so they get their own "matches drawings/site" checkbox instead of an amount-based flag
